LEARNING OUTCOMES	The course covers the theory of modern macroeconomics in detail. It builds upon the foundations that were established in the macro-principles course. The topics will be familiar: GDP, money supply, interest rates, unemployment rate, exchange rates, among other, but the analysis undertaken will be more rigorous and sophisticated. During this course, we will discuss several examples of macroeconomic phenomena in the real world. We will focus on the determination of macroeconomic variables in the short, medium, and long run and we will address a number of policy issues. A central theme will be understanding the power and limitations of macroeconomic			
	policy in stabilizing the business cycle and	promoting growth.		
GENERAL COMPETENCES	<ul> <li>Group/Team work</li> <li>Critical thinking</li> <li>Development of free, creative and inductive thinking</li> <li>By the end of the semester, you should be able to:</li> <li>Develop the ability to "think macro";</li> <li>Summarize the major macroeconomic theories developed to explain the relationships among macroeconomic variables such as GDP, unemployment rate, inflation rate, interest rates, government budget deficit, money supply, and the exchange rate;</li> <li>Conduct your own analyses of the likely effects of specific macroeconomic disturbances or government policy actions;</li> <li>Watch the macroeconomic news in the media with both greater interest and greater understanding, and critically evaluate articles on macroeconomics appearing in the popular press.</li> </ul>
